Fisdap Release Notes | 9-25-19

Enhancements

Appendix G updates

Table 2

- All items in column 2, 3 and 4 will now count independent of the instructor confirmation of that skill in the Lab. Previously skills marked with an asterisk didn't start to count until column 1 was populated.
- Column 2 will count skill on a patient of any type in a Lab shift which is a Formative scenario. Previously patient type of live human was excluded.
- Column 3 will count Independent skill in a Clinical or Field shift, skill on a patient in a Clinical or Field shift or skill on a patient in a Lab shift on a live human subject. Previously only patient records with a single skill were counted.
- Column 4 will count skill on a patient in a Clinical or Field shift, skill on a patient of any type in a Lab shift which is a Summative scenario. Previously patient type of live human was excluded from Summative Lab Scenarios.
- Line item "Trauma Endotracheal Intubation – Adults" will now include Nasotracheal Intubation and Orotracheal Intubation procedures in addition to Digital ET Intubation.

Mobile App

The iOS version of the Fisdap Mobile App has been enhanced to allow users to capture images in any mode. Previously users could only take images in Square mode. This will allow users to more easily take pictures of documents and forms directly via the app and attach documentation to their shift reports.

Resolved Issues

Appendix G fixes

"Intravenous Therapy" line item in Table 2 didn't count the IV with blood draw procedure. This procedure will now be included for columns 2, 3 and 4.

Graduations requirements report

The graduation requirements repot incorrectly showed "Cardiac-Acute Coronary Syndrome" and "Neuro – TIA" as separate columns. These columns have been removed as these impressions are counted as part of the Cardiac & Neuro categories, respectively.
